

RED HAT® NETWORK SATELLITE

Starter Edition

WHAT IS IT?

The Red Hat Network Satellite starter edition combines a Red Hat Network Satellite Server subscription, supporting up to 50 Red Hat Enterprise Linux servers, with Red Hat Satellite Deployment Service, a consulting engagement of up to three days.* This combination is specifically designed for enterprise customers running between 10 and 50 Red Hat Enterprise Linux servers. Each server needs to have a valid management entitlement - or needs to be purchased additionally. It's for customers who want to benefit from the advanced management capabilities of Red Hat Network Satellite server, but who don't have the trained staff to implement and fully optimize the technology.

WHAT DOES IT DO?

The Red Hat Network Satellite Server provides simple tools to efficiently manage the life cycle of systems on your network, including provisioning new systems, managing their updates and configuration changes, monitoring system performance, and eventually re-deploying the systems for a new purpose. This model allows you to take your Red Hat Network solution off the public Internet if desired. Combined with the Red Hat Satellite Deployment Service, Red Hat Network Satellite Server provides an easy way to get started - even for smaller deployments.

WHY SHOULD I CARE?

Every business can benefit from increased productivity. Businesses with smaller Linux deployments can now benefit from increased productivity and reduced system life cycle costs, greater administration consistency, and enhanced security. Red Hat Network Satellite lowers deployment, configuration, and management costs and enhances security because it's a single centralized tool. Secure connection policies allow for remote administration and secure content. In sum, the Red Hat Satellite Deployment Service ensures quick implementation and customization, plus the full benefits of Red Hat consultants' knowledge.

HOW IT WORKS?

For those customers with ten or more Red Hat Enterprise Linux servers, Red Hat offers Red Hat Network Satellite. With Red Hat Network Satellite, all functionality is stored locally on your network. The Satellite Server connects with the RHN over the Internet only to download updates. This allows for premium system management with maximum control, security, and flexibility.

To address the specific needs of businesses who have smaller Linux deployments and don't have the trained staff to implement and fully optimize a Red Hat Satellite Server, the starter edition is ideal, combining a Red Hat Satellite Server subscription with Red Hat Satellite Deployment Service. The Red Hat Network Satellite starter edition can be upgraded to a fully scalable Satellite server in case more than 50 servers require support.

THE RED HAT SATELLITE DEPLOYMENT SERVICE GUARANTEES:

Quick Implementation

Red Hat consultants have performed this engagement many times for organizations of all sizes. We have the expertise to rapidly deploy Red Hat Network satellite in your environment.

Full Optimization

Implementation is one thing, optimization is another. Red Hat experts will ensure that Satellite is fully optimized for your specific environment.

Return on investment

It's no secret that many IT projects turn into month-long headaches. Red Hat consultants often complete such projects in much shorter time. The process is time-tested and precise, paying for itself by freeing up resources and allowing users to leverage the cost savings of Linux more quickly.

Customization

Customized channels easily distribute third-party content to your Enterprise Linux systems through Red Hat Network.

Full knowledge transfer

Comprehensive knowledge transfer from our Red Hat consultant at the conclusion of the consulting engagement. Customers learn first-hand how to operate and administer Red Hat Network Satellite

Red Hat Network Satellite starter edition

Product order number (SKU)	MCT0867: € 6.500/GBP 4.514*	One-year subscription
	MCT0867F3: € 16.575/GBP 11.511*	Three-year subscription
Red Hat Network Satellite Server subscription	One or three-year subscription	Includes full Satellite functionality for up to 50 systems
Red Hat Satellite Deployment Service	Information gathering	· Introductory meeting, project scoping
	Planning and validation	· Component gathering · Create test plan
	Install and configure satellite	· Install and configure satellite · Creation of one sample custom channel · Creation of groups/users
	QA and integration	· QA of functionality · Final integration with production environment
	Project completion and review	· Complete and present all documentation · Full knowledge transfer with client team

* Travel expenses not included

RESOURCES PROVIDED BY RED HAT

Red Hat Professional Services offer the experience and expertise to determine the strategy that will work best for your environment. Our consultants are subject matter expert with years of experience delivering Red Hat and open source solutions in an enterprise environment. Satellite Deployment Service includes a consultant; which will perform the work, manage all stages of the engagement (day-to-day and long-term projects), provide full knowledge transfer, and complete any necessary documentation.

RESOURCES PROVIDED BY CUSTOMER

This project requires access to the personnel responsible for the development, deployment, and production support of the applications in question. It is critical that these individuals be involved in the planning phases of the project and available for information and assistance in later phases.

Specifically, the customer will need to provide access to one or more of the following:

- **Project Sponsor:** This person possesses ultimate sign-off authority at the client level and provides an overview of long-term goals and objectives, typically an IT Director.
- **Project Manager:** This individual is in contact with Red Hat's consultant and manages the day-to-day client-side activities, ensuring the timely delivery of information required for the project.
- **IT and other staff:** These individuals provide information about the client's IT infrastructure and future requirements. Depending upon the scope of the project resources from development, operations, planning, purchasing, accounting, or finance may be incorporated into the project team or accessed via the Project Manager as needed.
