

Wise Package Studio® Professional Edition from Symantec

Advanced application packaging for more reliable deployments

Overview

Wise Package Studio® Professional Edition *from Symantec* provides advanced software packaging functionality by enabling you to create and customize packages, virtualize software, and identify and remediate issues that prevent software from properly functioning in your environment. It's based on a structured, best practice process called enterprise software packaging. It also provides the starting point for adding extended functionality via the Quality Assurance module and Enterprise Management Server.

Why prepare applications for deployment?

Preparing applications and patches for deployment is an important undertaking with numerous benefits. Starting with the enterprise software packaging process, Wise Package Studio is the ideal choice for application packaging, customization and conflict management. The benefits include:

- More reliable deployments
- Standardized desktop configuration
- Faster software rollouts
- Easier migrations to new operating systems including Microsoft® Windows 7

How does application repackaging work?

You don't need to worry about following the "right" process; pre-built templates guide you through the enterprise software packaging process. With the intuitive Workbench interface, it's easy to train repackaging teams and ensure a consistent approach is followed.

Patch testing and management

When you need to quickly test and deploy critical patches, Wise Package Studio helps you understand how patches will affect your environment. Patch risk assessment gives you the tools to identify instances of vulnerable files that will not be upgraded by a patch and enables you to remediate such situations. Patch impact assessment identifies situations in which the installation of a patch could have an adverse impact on software in your environment. Patch testing helps you create a test plan and use Preflight Deployment to test your patch.

Take advantage of software virtualization

Increase desktop stability and lower costs by utilizing software virtualization. By running virtual applications, you eliminate the possibility of conflicts with other applications and with the base operating system. Use Wise Package Studio to create, edit, and manage virtual software archive packages, which enable applications to run in a virtual environment when used with Symantec™ Workspace Virtualization.

Effortless distribution

When it's time to distribute your packages, Wise Package Studio ensures efficient and seamless deployment. Packages created with Wise Package Studio can be distributed by all of the leading software distribution systems, including Altiris™ Software Management Solution *from Symantec* and Microsoft® System Center Configuration Manager.

System requirements

System requirements for Wise Package Studio Server

- Pentium IV 1 GHz (minimum), Pentium IV 2 GHz (recommended), Pentium IV 4 GHz (optimal)
- Windows® Server 2000 (minimum), Windows® Server 2003 or Windows® Server 2008 (recommended)
- Internet Explorer 6.0 (minimum), Internet Explorer 7.0 or 8.0 (recommended)
- 512 MB RAM (minimum), 2 GB RAM (recommended), 4 GB RAM (optimal)
- SQL Server 2005, SQL Server 2005 Express, or SQL Server 2008 (English versions only)

System requirements for Wise Package Studio Client

- Pentium III 800 MHz (minimum), Pentium III 1 GHz (recommended), Pentium III 2 GHz (optimal)
- Windows® 2000 SP4 (minimum), Windows® XP Professional SP2 or later (recommended)
- Internet Explorer 6.0 (minimum), Internet Explorer 7.0 or 8.0 (recommended)
- 256 MB RAM (minimum), 512 MB RAM (recommended), 1 GB RAM (optimal)
