Erillisistä työkaluista yhtenäiseen kyberpuolustukseen

Kyberhyökkäykset siirtyvät nykyään ympäristöstä toiseen sen sijaan, että ne pysyisivät vain yhdessä paikassa. Tätä on jatkunut jo pitkään – eikä kyse ole vain yksittäistapauksista, vaan ilmiö näkyy monentyyppisissä tietoturvaloukkauksissa. Tätä tapahtuu yrityksen sisäverkossa, pilvessä ja kaikkialla muualla, missä tietojasi on. Hyökkääjät hyödyntävät henkilökohtaisia tietoja päästäkseen käsiksi sinun ja tuttujesi tietoihin sekä laajentaakseen hyökkäystä yhä uusiin kohteisiin.

Puolustuksessa ja suojaamisessa tilanne on mielenkiintoinen. Useimmilla tiimeillä on käytössään hyvät työkalut, mutta ne toimivat turhan usein erillään toisistaan.

Tämä epäsuhta näkyy siinä, miten kauan kokonaiskuvan hahmottaminen kestää ja kuinka paljon vahinkoa on jo ehtinyt tapahtua ennen kuin tilanne selkeytyy. Incident response -toiminnassa aika on rahaa.

Siksi meidän on muutettava tapaamme ajatella kyberpuolustusta: kyse ei ole erillisistä hallintatyökaluista, joita pyöritetään monista eri konsoleista, vaan kokonaisuudesta, jonka on toimittava koordinoituna ja itsenäisenä (agenttisena) puolustusjärjestelmänä.

Nykyaikaiset kyberpuolustusjärjestelmät pystyvät havaitsemaan toimintaa eri ympäristöissä, yhdistämään signaalit reaaliajassa ja reagoimaan niihin koordinoidusti.

Jos koet, että tämä voisi parantaa näkyvyyttä tietoverkostasi, ota yhteyttä. Kyse ei aina ole siitä, että kaikki menee uusiksi.

PROXMOX

Simplify your data center

Secure, flexible, and reliable open-source enterprise solutions.
For the highest demands and tight budgets in
professional IT environments.

Proxmox
Virtual Environment

Boost productivity up to 30% and do more with less – up to 6x lower TCO than traditional databases. EDB PG AI brings analytics and AI to your core operational data, ensuring that your data is always ready for emerging demands, without extra tools or expertise.

Proxmox
Backup Server

Meet today's demand for personalized and AI-driven experiences. Unlock the fastest path to GenAI application development using just five lines of familiar SQL code to kickstart automated AI pipelines and bring new, sovereign AI applications into production 3x faster.

Proxmox
Datacenter Manager

Grow your business with distributed, highly available databases that support always-on applications. Uninterrupted operations and AI-ready data drive customer-centric growth through new use cases like chat bots and customer 360 solutions, unlocking the full potential of your data.

About Proxmox

We develop powerful and efficient open-source software to simplify your server management. Proxmox products and services enable you to deploy an affordable, secure, and open-source IT infrastructure. Businesses of any size, sector or industry as well as NPOs or the educational sector all use the open-source platforms from Proxmox.

CorelDRAW® GRAPHICS SUITE 2026

Powered by Artist Intelligence

CorelDRAW® Graphics Suite 2026 yhdistää ihmisen luovuuden ja tekoälyn tehokkuuden määritellen uudelleen, mikä suunnittelussa on mahdollista. Tämä julkaisu on suunniteltu vahvistamaan taiteellista ilmaisua eikä korvaamaan sitä. Uusi Graphics Suite sisältää älykkäitä työkaluja, jotka nopeuttavat ideointia ja tehostavat työnkulkua. AI Generate muuntaa tekstikuvaukset mukautetuiksi kuviksi sekunneissa, ja uudet tekoälypohjaiset muokkaustyökalut, kuten kehotepohjainen kuvien muokkaus, taustan poisto yhdellä napsautuksella sekä tekoälyavusteinen maskaus, tarjoavat ammattitason tarkkuutta nopeammin kuin koskaan aiemmin.

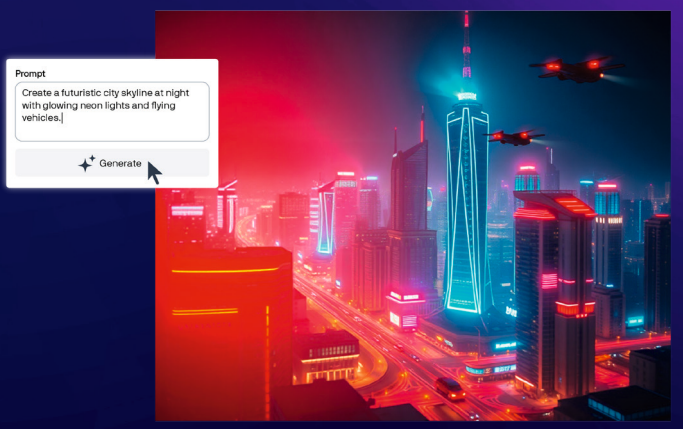

Tekoälyn lisäksi saat käyttöösi uudistetun käyttöliittymän, merkittävästi nopeamman suorituskyvyn ja päivityksiä suosikkiominaisuuksiin. Mukana ovat myös CorelDRAW Web -parannukset ja tilaajille suunnattua eksklusiivista sisältöä.

Graphics Suite 2026 on älykkäin julkaisu tähän mennessä. Se auttaa sinua suunnittelemaan nopeammin ja säilyttämään samalla täyden luovan hallinnan.

Parallels®

Parallels Desktop for Mac - Business Edition

Parallels Desktop for Mac Business Edition on helppo, turvallinen ja tehokas sovellus ammattilaisille Windowsin käyttämiseen Macissa Intel- tai Apple Silicon -pohjaisissa laitteissa.

Helppo hallinta selkeällä lisensointimallilla, sisältäen volyymiaktivointiavaimen, useita käyttöönottovaihtoehtoja, jotka sopivat jokaiselle organisaatiolle sekä edistyneeseen hallintaan komentorivillä.

Suojaa teknologiainvestointisi ja anna tiimeille mahdollisuus työskennellä älykkäämmin käyttäen Windows-sovelluksia tehokkaissa Apple Silicon Maceissa. Ohjelmistoon sisältyy 24/7 Premium-tuki sekä yli 50 työkalua, jotka yksinkertaistavat jokapäiväisiä toimintoja, kuten näytön tallentamista, tallennustilan siivoamista, tiedostojen salaamista tai videon lataamista – kaikki Parallels Toolboxin avulla.

embarcadero®

An Idera, Inc. Company

Embarcadero develops tools for building and modernizing native applications and data services. With Delphi, modern C++, and an integrated development environment, teams can maintain business-critical software across desktop, mobile, and server platforms.

RAD Studio 13.2 "Florence"

RAD Studio 13.2 brings Delphi and C++Builder together in a powerful development environment with a fully 64-bit Windows IDE. Integrated Navigator and its editor minimap simplify navigation through large projects. New VCL navigation controls and an expanded FireMonkey Style Designer speed up UI development, while SmartCore AI components and MCPConnect help connect applications to AI tools and agents.

Delphi 13.2 "Florence"

Delphi 13.2 introduces an LLVM 20 toolchain for 64-bit Linux and parallel code generation for Linux and Windows Arm64EC, accelerating builds and improving application performance. Windows on Arm also gains dynamic runtime packages. FireDAC adds PostgreSQL 18.4 support, Oracle CLOB prefetching, and IBM Informix connectivity on Linux.

C++Builder 13.2 "Florence"

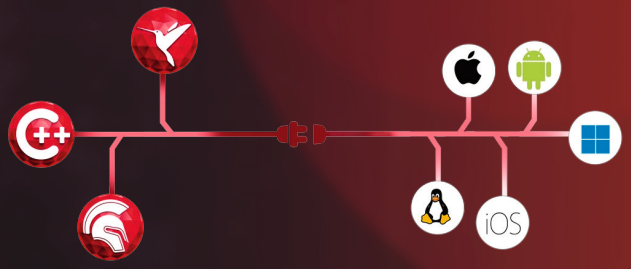

C++Builder 13.2 strengthens the Clang 20-based Win64x toolchain with C++23 support. In-process compilation provides clearer build diagnostics, responsive cancellation, parallel compilation, and fewer unnecessary rebuilds. Improved handling of design-time and mixed Delphi/C++ packages supports more reliable component-based Windows development.

InterBase 15.1

InterBase 15.1 is a lightweight, embeddable SQL database for mobile, desktop, and server applications. InterBase 15 strengthens security with AES-256 encryption by default, SHA-256 password digests, and modern TLS support. Update 15.1 adds optional AI-powered Smart CodeInsight to IBConsole for generating, explaining, and optimizing SQL, along with usability and platform stability improvements.

RAD Server

RAD Server provides a ready-to-deploy REST backend for Delphi and C++Builder applications, with user and group management, multi-tenancy, API versioning, and Swagger-based documentation. In RAD Studio 13.2, its Management Console gains sortable user and group columns and better High-DPI support.

Continuous Database Protection

Your database is at the heart of your business. Guarantee protection of your critical Oracle SE, SQL Server and PostgreSQL databases with a continuously updated standby database.

New for Oracle - the optional Zero Data Loss (ZDL) feature achieves sub-second RPO

If you could protect nearly all of your data during an outage, why wouldn't you?

For years, organizations running Oracle Standard Edition have accepted that a few minutes of potential data loss was simply part of Disaster Recovery.

But a few minutes can represent a lot of business activity. Payments, orders, customer records, inventory movements and other transactions may need to be identified, verified or recreated following an outage.

That trade-off has changed.

Dbvisit provides Disaster Recovery for Oracle Standard Edition and can now offer **Dbvisit StandbyMP Zero Data Loss.**

Zero Data Loss can reduce the amount of recent data potentially at risk from minutes to **less than a second**, while allowing organizations to remain on Oracle Standard Edition.

For critical and transactional databases, it's a simple question worth asking: if you have the option to protect that much more of your data, why wouldn't you consider it?

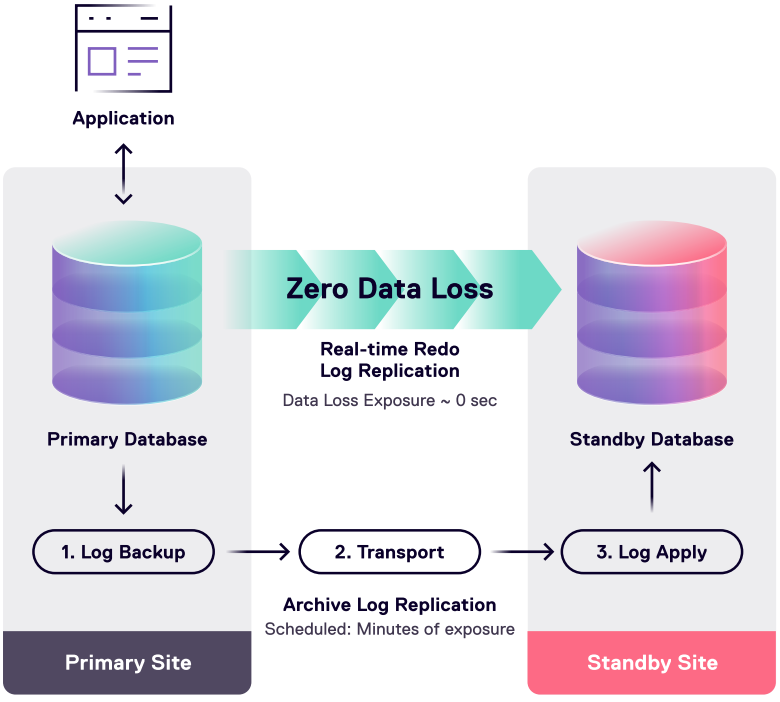

The ZDL Architecture

ZDL is an additional real-time replication layer that augments, rather than replaces, StandbyMP's existing Archive Log Shipping technology.

ZDL monitors the primary database's online redo logs and streams redo to the standby as it is generated, rather than waiting for the next archive log interval. The replicated redo can then be incorporated during standby activation to close the final log gap. This reduces the potential data loss (RPO) from minutes to sub-second.

The two complementary replication paths work together:

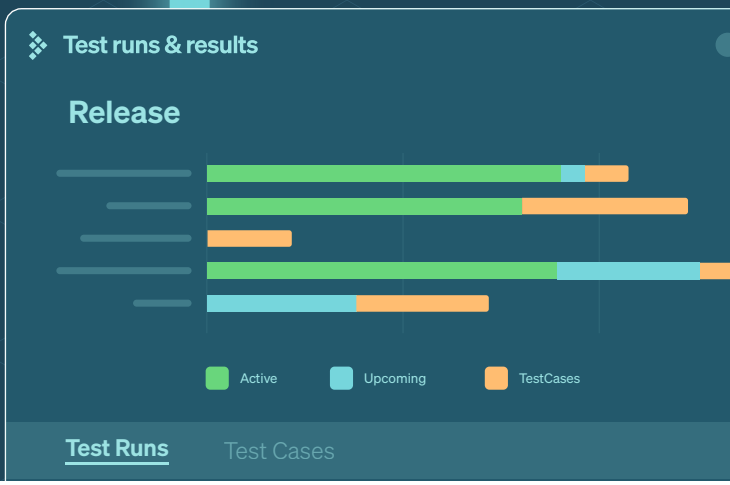

- Continuous redo streaming: Streams changes from the online redo logs as they are generated.
- Archive log shipping: Continues transferring and applying completed archive logs.
- ZDL extends, rather than replaces, StandbyMP's proven replication architecture.

TestRail By Sembi MOONSOFT

One Platform for Smarter, More Connected Testing

Centralize test management, connect manual and automated testing, and get the visibility your team needs to deliver quality software with confidence.

NASA SIEMENS SONY PayPal Adobe

Everything You Need to Manage Testing End to End

Manage tests in one place
Centralize manual and automated testing.

Plan & execute
Coordinate testing across teams and releases.

Connect your toolchain
Integrate TestRail with your development workflow.

Track quality
Monitor progress, coverage, and results.

AI-Powered Quality, Built Into Your Workflow

Use AI to accelerate testing, assess software quality, and connect TestRail with the tools your teams already use.

- **Generate** — Create test cases faster from requirements and user stories.
- **Assess** — Evaluate software quality with structured, measurable insights.
- **Connect** — Bring TestRail context into AI-assisted workflows with TestRail MCP.

AI when you need it. Your team stays in control.

Bring your entire QA process together with TestRail.

Adobe

Adobe Acrobat Studio

Uusi Adobe Acrobat Studio: nopeammat oivallukset, vaikuttavampi sisältö – kaikki yhdessä paikassa. Acrobat Studio yhdistää tutut PDF-työkalut, AI-avusteiset PDF Spaces -työtilat, Acrobat AI Assistantin sekä Adobe Express Premiumin sisällöntuotantoon. Tehokkaampi työ – vähemmän hyppelyä sovellusten välillä.

Mikä on Acrobat Studio?

Acrobat Studio on Adoben uusin ja kehittynein Acrobat-versio. Se sisältää kaiken, mitä Acrobat Pro tarjoaa, sekä AI-pohjaiset PDF Spaces -työtilat ja Acrobat AI Assistantin oivallusten ja analyysien tueksi. Lisäksi mukana on Adobe Express Premium, jonka avulla luot nopeasti esityksiä, flyereita ja some-sisältöä – kaikki samassa paikassa.

Tiivistettynä: Acrobat Studio = Acrobat Pro + AI Assistant + PDF Spaces + Adobe Express Premium

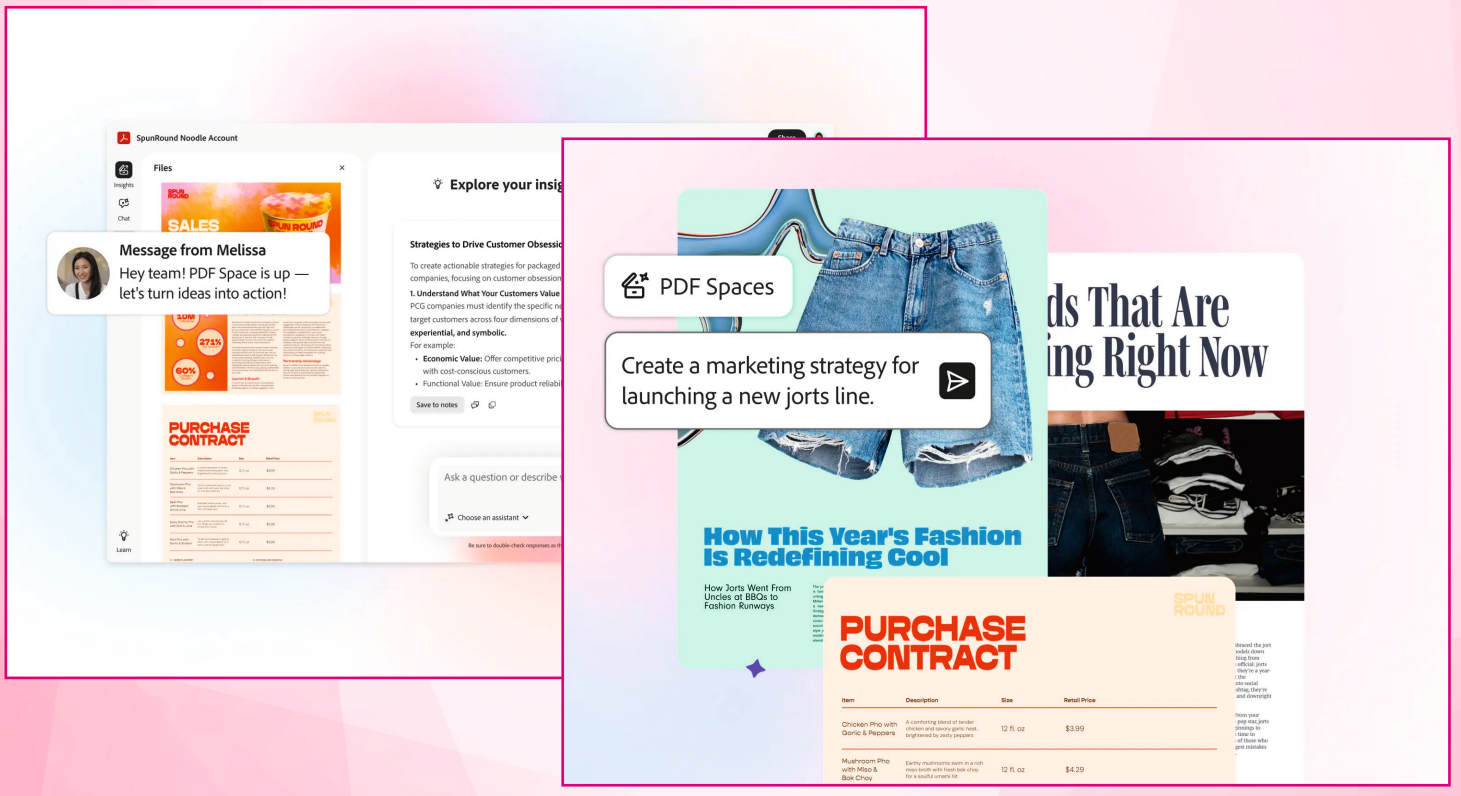

Kenelle ja miksi?

Tietotyön tehostajat: Yhdistä raportit, sopimukset ja liitteet yhdeksi keskusteltavaksi PDF Space -kokonaisuudeksi. Kysy, tiivistä, poimi luvut, ja jaa tiimiin – ilman tiedostosotkuja.

Myynti & asiakastyö: Tilannekuvat, tarjoukset ja muistiot – kaikki yhdessä. AI ehdottaa seuraavia toimenpiteitä ja esitysrungon, jonka viimeistelet Adobe Expressillä.

Johto, HR, lakiasiat: Yhdellä työkalulla yhteenvetoja, tarkistuksia, sopimusten redaktoinnit ja e-allekirjoitukset; jaa PDF Space helposti sisäisesti tai asiakkaan kanssa. IT & hallinto: Yrityskäyttöön suunniteltu: Admin Console, tietoturva, käyttöoikeudet, SSO-valmiudet ja keskitetty hallinta.

IT & hallinto: Yrityskäyttöön suunniteltu kokonaisuus: Admin Console, tietoturva, käyttöoikeudet, SSO-valmiudet ja keskitetty hallinta.

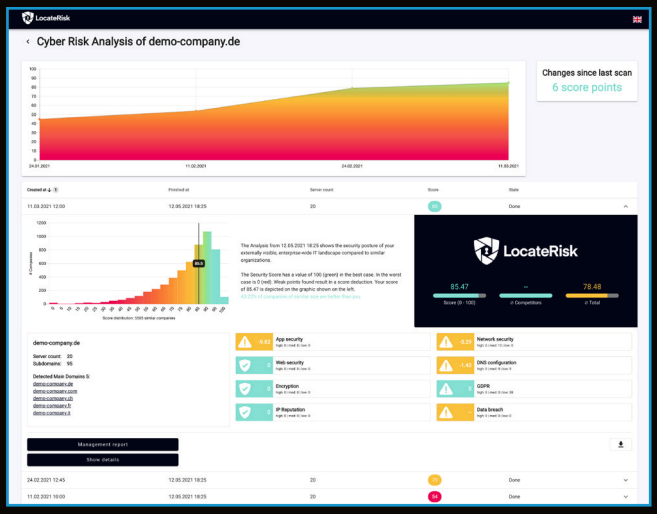

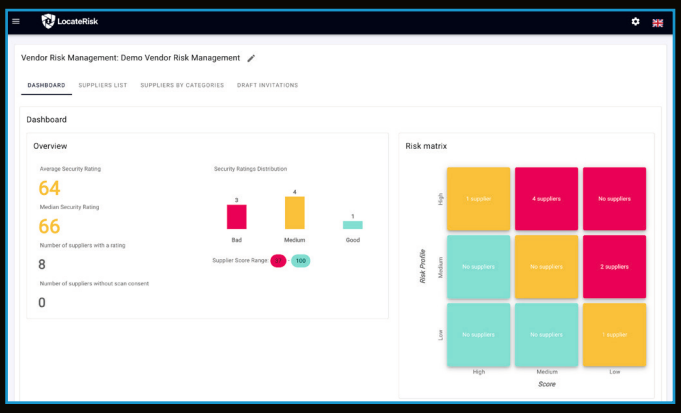

LocateRisk

Cyber Vendor Risk Management · C-VRM

LocateRisk's Cyber Vendor Risk Management enables you to control supply chain risks, validate security standards, and future-proof your business relationships. It significantly reduces assessment effort while providing a robust foundation for regulatory compliance.

- **Validate supplier information with objective evidence**
  By cross-referencing subjective supplier self-assessments with objective, technical scan data
- **Automated scans & digital questionnaires in one platform**
  for GDPR, NIS2, DORA, TISAX, ISO 27001, DIN 27076, NIST, etc.
- **Evaluate vendor compliance instantly and independently**
  Through passive scoring that assesses external risk posturewithout requiring supplier consent, cooperation, or response times
- **Structure vendors based on risk and relevance**
  Through category-based vendor classification, allowing you to group suppliers by criticality or industry and align assessment processes with their respective risk profiles
- **Address findings directly with responsible stakeholders**
  Through automated workflows that route identified risks to the appropriate internal teams or external partners for resolution
- **Streamline regulatory compliance**
  Through standards-based templates (such as NIS2, ISO 27001,...) and AI-supported analysis that reduces manual assessment effort
- **Scale vendor risk management efficiently**
  Through a unified platform that covers the entire lifecycle, frominitial assessment to continuous monitoring, within a singlesolution
- **Provide audit-ready evidence of security standards**
  Through structured, tamper-proof documentation of technical metrics (hard facts) and organizational inputs (soft facts) in one centralized system
- **Reduce time-to-action through preemptive intelligence**
  Identification of critical vulnerabilities via proprietary detection methods prior to public NVD disclosure
- **Seamlessly integrate AI models via Model Context Protocol**
  The MCP interface enables straightforward integration with proprietary LLMs, simplifying SOC operations and enhancing the responsiveness of security teams

Faronics™ Cloud

TRY **FREE**

SIMPLE SOLUTIONS FOR **DEVICE MANAGEMENT**

Managing computers, mobile devices, and software shouldn't mean jumping between different apps or wasting time on repetitive tasks. Faronics Cloud brings all your core IT management into one web-based platform, giving you clear visibility and total control over your entire device fleet.

Automate software updates, roll out security patches, fix user issues remotely, and restore systems with a simple reboot. Faronics Cloud takes the hassle out of daily IT maintenance so your team can keep everything running smoothly with far less effort.

DEEP FREEZE ON CLOUD

Patented reboot-to-restore solution with 100% workstation recovery

MOBILE DEVICE MANAGEMENT

Web-based solution for administering distributed deployments of all your iOS, Android and Chromebook devices

COMPREHENSIVE ANALYTICS

Get ahead of problems, simplify operations and reduce expenses using detailed dashboards and reports

PATCH MANAGEMENT

Up-to-date patches with on-demand patch scanning plus granular policies with selective updates

REMOTE CONTROL

RDP or VNC into any of your workstations

SOFTWARE DEPLOYMENT

Keep all your software updated automatically with zero disruption

TeamViewer

TeamViewer DEX Essentials: Proactive IT starts here

TeamViewer DEX Essentials gives IT teams real-time visibility and automated remediation across core areas of device health. With 16 powerful insights, DEX Essentials can resolve issues before they impact users - reducing tickets, preventing downtime, and keeping endpoints secure, fast, and reliable.

www.moonsoft.fi • 0207 439 500 • sales@moonsoft.fi

TeamViewer

Clear insights. Intelligent action.

Give IT teams the clarity and control they need to improve digital employee experience at scale. **DEX Essentials** combines experience intelligence, automation, and validation to help reduce friction, prevent recurring issues, and demonstrate IT impact - all from one single dashboard.

Experience-level visibility

Understand how devices, applications, and systems perform from the employee's perspective, using live and historical experience data to uncover hidden friction.

Automated issue resolution

Resolve common problems automatically with rule-driven and self-healing actions - reducing manual work and unnecessary support interactions.

Built-in value validation

Measure avoided tickets, saved time, and efficiency gains with clear reporting that shows the real impact of IT actions.

Modern IT isn't reactive. It's experience-driven and outcome-focused.

Maintain stability through experience insights

Continuously assess device and application behavior to identify patterns that indicate declining performance or experience quality. Address risks early to keep employees productive and systems reliable.

Act before friction turns into tickets

Define experience thresholds and trigger automated responses when issues begin to surface. Prevent repeat incidents and reduce disruptions before users need to ask for help.

Automate work that doesn't need human attention

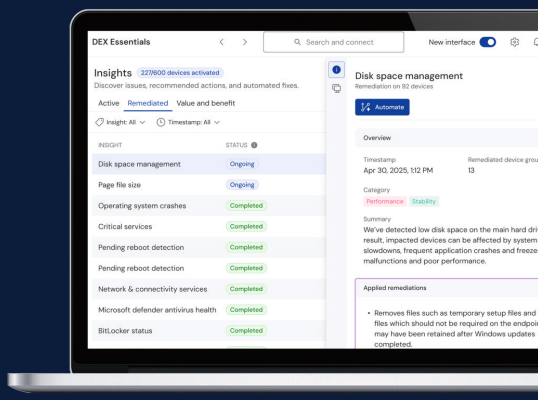

Use condition-based and scheduled automation to handle routine fixes and maintenance tasks. Reduce operational overhead and allow IT teams to focus on strategic initiatives.

Resolve issues quietly, without interrupting employees

Execute remediations, scripts, and corrective actions remotely in the background - minimizing downtime while maintaining a seamless end-user experience.

Try DEX Essentials free for 30 days

Scan the QR code and request a trial

Kong

The Konnect Unified API Platform

AI value is made real when exposed as secure, governed API services. Events and real-time data become true data products when packaged as self-serve APIs. Microservices drive value when service-to-service communication is driven by consistent, scalable APIs.

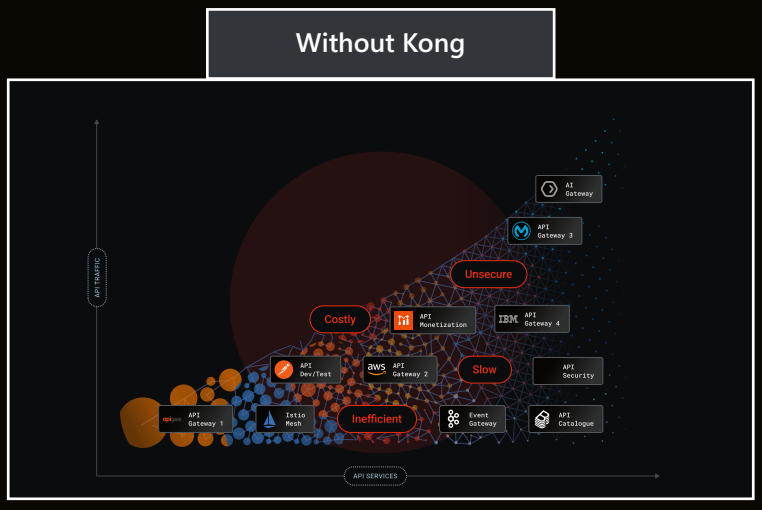

The API is at the heart of every major story your business cares about.

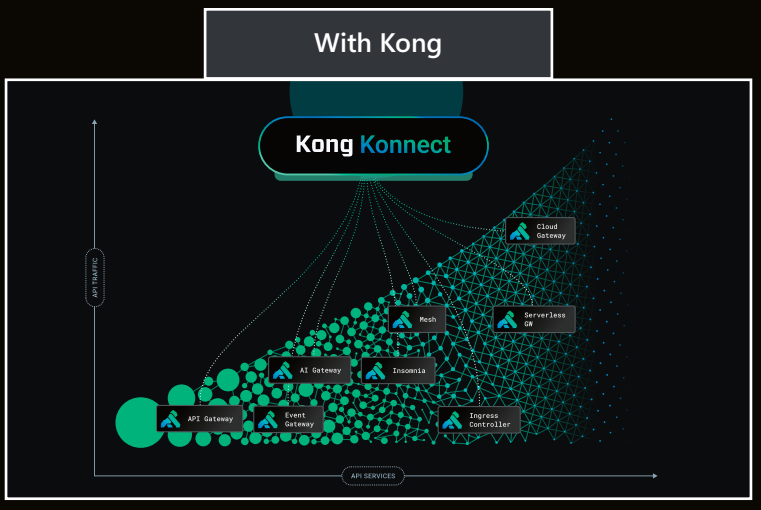

However, APIs don't just appear out of thin air. APIs must be built. APIs must be run in production. APIs must be secure. APIs must be discoverable. And the entire API lifecycle must be governable. And all of this has to be done securely, reliably, and at high scale and performance - without breaking the bank.

This is where the API platform comes into play. And this is where Kong Konnect is essential.

What about building a massive, multi-tool tool chain?

Some organizations start their API platform journey by acquiring and eventually trying to stitch together disparate API tooling. But this results in poor governance, an increased security vulnerability surface, ballooning cost structures, and a poor developer experience.

JETBRAINS

One subscription, two powerful tools

JetBrains AI is a single subscription comprising a suite of AI solutions that boosts your teams' productivity. You remain in charge of your organization's AI usage at all times.

AI Assistant

Your everyday coding boost

Best for
Boosting day-to-day developer efficiency without changing existing workflows

Function
Provides smart code completion, explanations, documentation, commit messages

How it works
Works alongside the developer with contextual suggestions and code-generation in real time

When to use
Day-to-day development tasks

Junie

A smart coding agent

Best for
Accelerating large, multi-step tasks like architecture updates, builds, and migrations

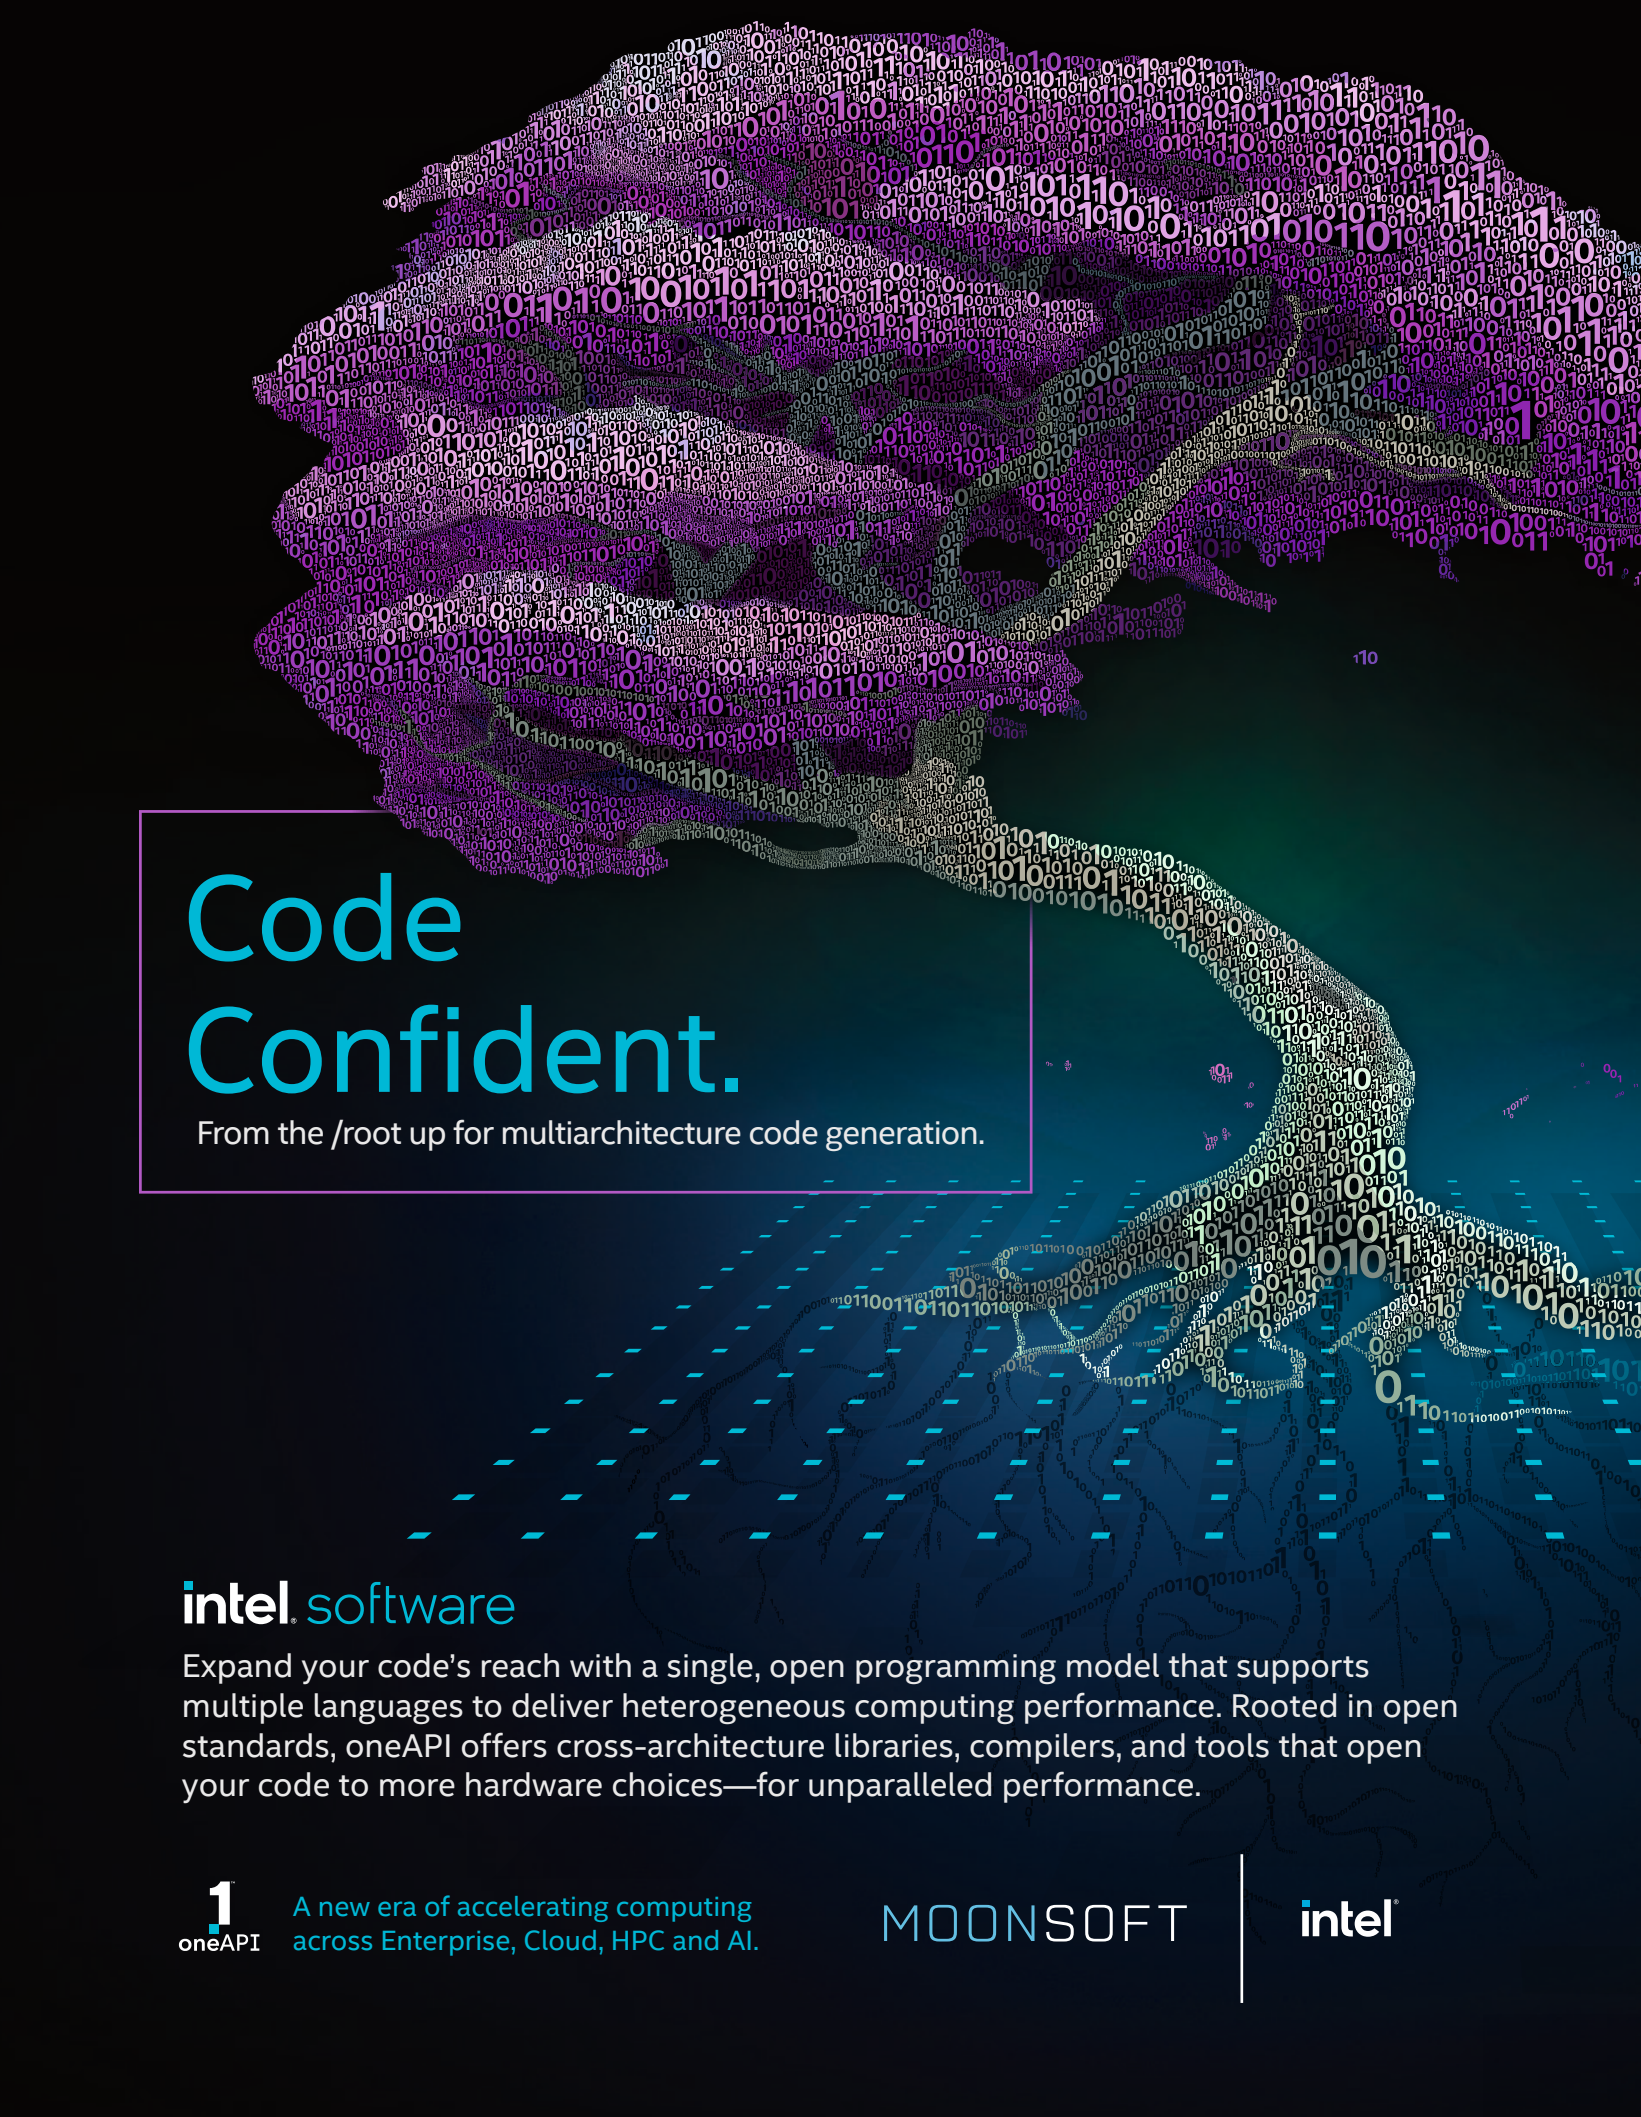

Function
Acts as an autonomous coding agent: plans, edits, runs tests, and fixes across multiple files

How it works
Executes developer-defined tasks autonomously, interacting across project context

When to use
Complex flows: feature builds, refactoring, and migrations
